Mr. Dinesh Divekar

Business Mentor, Consultant & Trainer

Introduction

Pricing is what marketing is all about. The whole point of the practice of marketing is to ensure the long-term survival of the company and survival will only be assured if the company is profitable in the long-term. However, pricing is more than a scorecard, the better the company's marketing, the higher the profit (in the long-term at least). Pricing is also a dynamic element of the marketing mix. Price can affect the way customers behave and because "price" is perceived as being the single largest indicator of value, it will impact on their perceptions of the company's offering versus that of the competition.

Setting the right price is always a challenge. If the product is sold at a premium price, profitability increases but its volume of sale decreases. If the product is sold economically, it might result in a higher sale but the margins shrink. Therefore, setting the right price is a perennial challenge. This programme will help the participants to address this challenge.

Objective

after taking this 1-day training, participants will:

- Learn the various stages in setting a price of the product, advantages and disadvantages of different pricing methods;
- Learn to calculate prices using different approaches;
- Develop competence to choose the correct pricing strategy to fit a firm's overall objectives;
- Learn some of the economic theories underlying the marketer's view of price and value.

Who should Attend

This learning programme is suitable for Entrepreneurs, Directors, Marketing/Sales professionals and all those who are involved in

Introduction

Value Analysis (VA) is concerned with existing products.

It involves a current product being analysed and evaluated by a team, to reduce costs, improve product function or both.

Value Analysis exercises use a plan which step-by-step, methodically evaluates the product in a range of areas.

These include costs, function, alternative components and design aspects such as ease of manufacture and assembly.

In contrast with VA, Value Engineering (VE) is concerned with new products. It is applied during product development.

The focus is on reducing costs, improving function or both, by way of teamwork-based product evaluation and analysis.

This takes place before any capital is invested in tooling, plant or equipment.

Objective

To acquaint participants with basic methodology of VA and its practical approach for implementation

taking the decision about the price of the product.

Unique Programme takeaway:

How to become a “Market Leader” in a particular industry is always a challenge for the companies who are “Market Challengers” or “Market Followers” or those who work in niche markets. The participants will get a strategic plan for their movement to “Premium Pricing”. It may be noted that this is an indigenously development documents and participants and they will not get it in any book or website.

Agenda for Day 1

- Introduction to Product Pricing
- Eight Stages of setting the Product Price
- Price sensitivity – what type of buyer my product has?
- Price and Costs
